# Switch technology is evolving

A clever new option is now available from Schneider Electric - IMPRESS, the latest in Push-Button technology.

## Unique

IMPRESS Push-Button technology provides a uniquely different look and action from conventional rocker switches.

## Stylish

With its soft blue LED indication and minimalistic profile the new IMPRESS range blends in with existing Push-Button technology found in the home or office.

## Practical

The LED can be set to show when the power is on, (great for when the light being controlled is in another room e.g. the garage), or as a location aid in the dark.

## Reliable

IMPRESS Push-Buttons produce a smooth, consistent and quiet quick-switching action with every push, all with the same reliability as traditional rocker switches.

## Functional

With a 20A, 16AX rating IMPRESS is also suitable for controlling, fluorescents, energy saving bulbs and halogen lighting.

## Renovate

The IMPRESS Push-Button range suits most existing switch plates from Schneider Electric, allowing you to modernise the look of your interior at a fraction of the cost.
